The maritime sector has three major component industries. They are the port industry, the shipping industry and the maritime business services industry. And all three components have direct and indirect economic impact on the nation. Nigeria has a growing shipping sector but one that is plagued by many challenges.

The maritime sector of Nigeria is estimated to be worth $8 billion. As at early 2018, the total cargo stood at 96,626,737 MTs. Nigeria’s total annual freight cost is estimated at between $5 billion and $6 billion annually.

Nigeria’s total annual freight cost is estimated at between $5 billion and $6 billion annually.

We have a vast inland waterways resource of about 3,000km that can support a vibrant intra-regional trade.
